PROFESSIONAL SUMMARY

AI Engineer and founder who builds production systems that fix real business processes. I ship software with AI agents in the loop: spec-driven development with Claude Code guarded by unit and E2E tests, a provider-agnostic LLM lead-qualification assistant, and a Claude Agent SDK content pipeline with scoped tool permissions. My products run real businesses: MiPOS, a DIAN-compliant point-of-sale SaaS, is in production with its first paying client in Colombia, and Escuela Perritos, my canine education company, runs on a CRM I built that automates billing, payments, routes and certifications. 3+ years building SaaS platforms with React, Next.js and TypeScript, on top of 10 years in tech spanning board-level diagnostics and live broadcast infrastructure, which shaped a root-cause-first approach to engineering. Open to remote roles.

TECHNICAL SKILLS

- **AI Engineering:** Agentic workflows (Claude Code, Claude Agent SDK, scoped tool permissions, project rules in CLAUDE.md and AGENTS.md, custom skills), LLM integration with provider-agnostic adapters (MiniMax, Ollama), spec-driven AI-assisted development with test guardrails
- **Process Automation:** Scheduled jobs (cron), webhooks, Mercado Pago (OAuth, Checkout), PDF generation, electronic invoicing (DIAN via Factus)
- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Frameworks & Libraries:** React, Next.js (App Router, Server Components), Astro, React Native (Expo), Zustand, TanStack Query, Zod
- **Styling & UI:** Tailwind CSS, shadcn/ui, Radix UI, Framer Motion, responsive mobile-first design, Figma-to-code
- **Backend & Data:** Node.js, Bun, NestJS, Prisma, PostgreSQL, Supabase, REST APIs, JWT auth with refresh token rotation
- **Testing & DevOps:** Vitest, Playwright (E2E), Vercel, AWS, Linode, Koyeb (Docker), Cloudflare (DNS, SSL, routing), Electron, Git & GitHub, Vite

PROFESSIONAL EXPERIENCE

Santo Código — *Remote*
Frontend Developer — *October 2025 – Present*
Software development agency delivering complex web applications for multiple clients.

- Develop and optimize user interfaces for multiple complex web applications using React, Next.js, and TypeScript, ensuring code modularity and maintainability.
- Collaborate with design and product teams to translate Figma prototypes into highly interactive, accessible, and responsive components with Tailwind CSS.
- Improve site performance and SEO through Server Components, efficient caching strategies, and Core Web Vitals optimization.

Escuela Perritos — *Buenos Aires, Argentina*
Founder & AI Engineer — *July 2026 – Present*
Canine education business running on software I designed and built (escuelaperritos.com.ar).

- Built the public site and an integrated CRM in a single Next.js 16 application (Prisma, PostgreSQL): leads by service, clients, student files, subscriptions, receipts, walkers, accounting and content.
- Automated monthly billing with a daily cron that issues renewal receipts, closes expired packages and flags overdue payments; integrated Mercado Pago via OAuth with verified webhooks and server-side pricing.
- Shipped level-based certifications with PDF certificates, QR codes and public verification, plus a daily route builder that sequences each walker's pickups and drop-offs.
- Developed through a spec-driven, AI-assisted workflow (Claude Code), guarded by Vitest permission tests for every server action and Playwright E2E runs against an isolated database.

Stream Tech — *Remote*
Co-Founder & Lead Engineer — *February 2024 – Present*

Technology company building SaaS products for LatAm businesses: point of sale, event management and streaming.

- Took MiPOS, a DIAN-compliant point-of-sale SaaS, to production with its first paying client in Colombia after a pre-go-live audit that fixed duplicate sales and invoices under concurrency, refresh token rotation and subscription enforcement.
- Built MiPOS desktop registers (Electron + embedded PostgreSQL) that sell offline and sync to the cloud seconds after each sale, with Ed25519-signed licenses, serial-port scales and ESC/POS thermal printing.
- Developed Ticketera MIES (5,200+ guests accredited) and evolved it into Event Hub BA, a SaaS for institutions: marketing site, dashboard rebrand and a multi-tenant white-label architecture audit.
- Operated live TV and radio streaming infrastructure (Ant Media Server) across AWS, Linode, and DonWeb Cloud, and managed DNS, SSL and routing with Cloudflare.
- Selected for Ruta de Emprendimiento 2024, a startup acceleration program focused on product and business model refinement.

TBS Wireless Services — *Remote*
Frontend Developer — *December 2023 – December 2025*
Partnership building the digital products of a Colombian telecom company.

- Built the company's responsive public landing page (tbswireless.com) using React, Next.js, and Tailwind CSS.
- Built an internal CRM that automated receipt generation, transforming a process that previously took 5 to 8 hours per day into an automatic issuance on payment confirmation, using Next.js 15, Prisma, and PostgreSQL.
- Designed a real-time dashboard with per-collector audit trails, KPI visualization (revenue, overdue accounts, collection rates), and dual sales modes (cash and credit), validated with Playwright E2E tests.
- Built the first version of the DIAN-compliant point-of-sale system that later became MiPOS.

Freelance — *Remote*
Frontend Developer — *January 2024 – January 2026*
Frontend and web solutions for startups and SMEs across B2B trade, payments, retail, media, and pet services.

- Built LatinBridge, a B2B international trade platform with trilingual routing (ES/EN/PT via next-intl), an admin lead pipeline dashboard, and an AI-powered lead qualification assistant.
- Delivered web presences for El Club Can (TanStack Start, React 19) and Octopay (Next.js 15, Framer Motion).
- Built Tienda Patitas, a complete e-commerce system: public storefront (React, Vite, TanStack Query), REST API (Bun, Prisma, PostgreSQL, MercadoPago), and admin dashboard with POS, inventory, and sales management (React, Zustand).

Freelance / Contract — *Colombia*
Audiovisual Infrastructure & Real-Time Streaming Specialist — *2019 – August 2025*

- Designed and operated technical infrastructure, internet networks, and real-time streaming servers for television channels, digital media platforms, and live broadcasts.
- Handled live multi-camera setups, CCTV operations, and high-fidelity video mapping to professional LED displays for massive corporate and entertainment events.
- Managed broadcast-grade switchers (Blackmagic), audio interfaces, mixing consoles and live-streaming encoders, providing IT support for zero-downtime transmission.

Self-Employed — *Venezuela*
Technical Support & Microelectronics Specialist — *2016 – 2018*

- Diagnosed hardware failures in mobile devices and performed board-level component repair.
- Applied systematic root cause analysis methodologies to resolve complex electronic issues, sharpening debugging habits now applied to software engineering.

EDUCATION

Frontend Developer — Platzi Web Development School — *2022 – 2023*
Certifications in Frontend Development and Programming Fundamentals: HTML, CSS, JavaScript, Git & GitHub, Mobile-First Design, Algorithms.

English for Beginners & Intermediate — Platzi English Academy — *2022*

LANGUAGES

Spanish — Native — **English** — Intermediate (professional reading, writing, and communication in tech environments)
